Portfolio and Market Commentary

April brought little new information to our global outlook. US stagflation stickiness continues to contrast with the Fed’s desire of a smooth off-ramp, bringing into question policy cuts are imminent, no matter their wishes. This contrasts with China, India, Europe, and many other large Emerging Markets still experiencing gradual reductions in price growth, allowing for further policy rate cuts (or at the least, an initiation of). Always welcomed to sustain, and advance growth.

The month saw natural USD strength and continued equity/risk asset and even UST weakness, with China an interesting outlier. The Fed’s only slim reed: US employment incrementally weakened, ever so slightly. If the Fed’s rent inflation gauge ultimately cooperates, it just may be enough to cut once before November’s election.

Other negative economic trends persist. Supply chain impediments continue, from Ukraine/Russia, Israel/Gaza, Panama Canal drought and the Houthi’s gating of the Red Sea; further foreign reductions in US Treasury holdings; and the gargantuan US deficit spending with its increasing interest costs, crowding out at the margin. It’s difficult to see how debt-fuelled growth leads to a return of rock-bottom core inflation and productive employment. Of course, adding significant tariffs in the era of neo-mercantilism won’t help.

Higher UST rates and high nominal credit yields have cushioned credit volatility. We have continued to take profit in several improving positions, such as TSTT, GOL, Brooge and Trans-Oil, tactically allowing our short duration risk-free yet well-yielding asset exposure to increase and remain focused yet patient to reinvest in attractive credit opportunities. Themes we’ve added continue across energy, shipping, autos, as well as more idiosyncratic stories.

Key Risks

The value of shares in the UCITS and income received from it can go down as well as up and investors may not get back the full amount invested. Performance may also be affected by currency fluctuations.

The UCITS seeks to achieve its investment objective by principally investing in a diversified portfolio of publicly-issued bonds. The UCITS may utilise financial derivative instruments for hedging, efficient portfolio management and/or investment purposes.

Bonds or other debt securities involve credit risk represented by the possibility of default by the issuer. In the event that any issuer experiences financial or economic difficulties, this may affect the value of the relevant securities and any amounts paid on such securities. This may in turn affect the Net Asset Value per Share of the UCITS.

Investment instruments have historically been subject to price movements that may occur due to market or issue-specific factors. As a result, the performance of the UCITS can fluctuate over time.

Other significant risks include: liquidity risk and operational risk. For full details of the risks applicable to the UCITS, please refer to the 'Risk Factors' sections in the current Prospectus of SphereInvest Global UCITS ICAV and the Offering Supplement of the UCITS sub-fund - SphereInvest Global Credit Strategies Fund.
